Please use the above dimensions as a guideline when creating your image file.

The full image (including background) should extend to the 1.8439" diameter; the graphic itself should extend to no more than 1.3981".

Although your image does not have to have the precise measurements above, the actual

measurements must be proportional to ensure your graphic will not be cut off.

I can work with a square image, if the graphic and outer outline fits into the square as shown on the upper right. This is especially critical if your graphic has a colored background.
